

A METHOD FOR SAFELY ENCRYPTING TRANSMISSION DATA

ABSTRACT

5 A method for safely encrypting transmission data is disclosed. The
method can be used in a personal digital assistant (PDA) or a mobile
phone handset for connecting to a network to download data. An access
device serves to be connected to a network, and a series number is used as
encrypting key. Thus, the data acquired from a network is encrypted. For
10 the users to download data, the download data is only used through the
access device of the user, other users can not use the data. Therefore, the
objects of paying fees by users and encrypting transferring data are
achieved.
